

A structurally sound idea
from the world leader in OSB.

LP OSB: There's a lot to back it up.

Working with LP means your product is backed by over 25 years of experience in OSB product development and innovation. It means you have an international network of mills that will ensure there is product available when you need it. It also means that you have a manufacturing

GLOBAL OSB PRODUCTION

capacity of approximately 6 billion feet of OSB production (the leading share of global OSB production) at your disposal. And it means you will have the benefit of LP's technical support, problem resolution and continued research.

In other words, it means you worry less because you have the support of the industry leader behind you.

Now the world's most popular structural panel.

Oriented strand board is an innovative, affordable and environmentally smart wood-based structural panel. It has become the most popular structural

panel type in the United States since it was first commercialized on a large scale by LP over two decades ago.

Improved design for easy application.

Years ago contractors asked LP for a more durable sheathing. And LP listened. Our engineers developed a formula for increased strength, stability and moisture resistance. We then added an advanced ACI® coating that penetrates the edges to keep swelling to a minimum. Today, LP engineered wood sheathing is a well-known industry success. There are a lot of reasons why:

- Excellent moisture tolerance – exhibits none of the stress characteristics of veneer-based boards which can lead to distortion, splitting and delamination.
- Excellent dimensional stability – in a wide variety of environmental conditions.
- Consistent quality – not dependent on the character of an individual log.
- Easy to install – nailing lines, skid-resistant surface and easy to saw.
- Excellent fastener holding – resists splitting even when nailed close to panel edge.
- Pre-marked nailing lines to make installation fast and easy on walls or roofs.
- Skid-resistant surface provides better traction on the job site.
- A better alternative to plywood.
- Backed by a 20-year limited warranty.

An innovative building material.

LP manufactures OSB sheathing using a truly renewable building material, manufactured from a sustainable resource. This means enhanced performance comes from our engineering innovations – not

from the size or type of trees used. So builders and homeowners can be confident that they're choosing products made in an environmentally smart way.

SPECIFICATIONS

- Roof, wall and two layer floor applications.
- Available in standard 4' x 8' size. Sizes 4' x 9' and 4' x 10', and over-sized panels are subject to availability.
- Available in a wide range of thicknesses from 1/4" to 1-1/8".
- For extra strength and shear values, specify our APA Struc-1®-rated sheathing.

More innovative choices from LP.

As a world leader in the building products industry, LP offers a complete line of quality materials. Each is designed to meet specific builder needs, and is backed by product testing, field research and LP's commitment to quality.

LP SHEATHING OPTIONS

Structural Panels

- LP OSB is equal to or better than SYP plywood in nail withdrawal strength
- Advanced ACI® edge coating reduces water absorption and improves moisture tolerance
- Consistent quality, no warping, buckling, sagging or cupping
- Engineered to be uniform and stay flat and rigid

TechShield®

- Prevents up to 97% of the sun's radiant heat from entering the attic
- Less heat is transferred from the attic to the living space, keeping the home cooler
- Allows attic air conditioning units to operate more efficiently
- Installs just like regular roof sheathing

LP FLOORING OPTIONS

Top Notch® weather resistant

- T&G sub-flooring
- Number one selling sub-floor
- World's only self-draining flooring system

Top Notch® OP® weather and rain resistant

- Advanced formula that reduces edge swell
- Improved moisture resistance
- Improved overall performance

Top Notch® HP extreme weather resistant

- All the qualities of regular Top Notch, with a 90-day, No-Sand Guarantee and a 50-year limited warranty
- Superior strength and stiffness

Count on LP.

LP is committed to developing innovative, high-quality building products focused on meeting customer needs. This means you can have confidence in knowing that LP's commitment to outstanding service and world-class products is there to support your business.
